

Assessment 2

Group 10 Members:

**Ben Walker, Josh White, Chris Williams, Gavindu Tissera, Nana
Twum Oviarobo, Tamerlan Urazbayev, Tymur Topala**

Implementation

We used the following third-party assets and libraries:

- **LibGDX** - Apache Licence 2.0 [1]
- **Game Over** sound effect - CC BY 3.0 [2]
- **Gradle** - Apache Licence 2.0
- **Temurin OpenJDK 17** - GNU GPL 2.0 with Classpath Exception [3]
- **Mute and unmute buttons** - CC0 [4]
- **jcbyte/longboi-life** - MIT Licence [5]
- **Shade UI** - MIT Licence
- **Road Sprites** - Allowed for non-commercial use [6]

Our game is licenced under the Apache Licence 2.0. This means we are permitted to use all of the assets listed above in our project. CC BY 3.0 also requires us to acknowledge the original source and authorship of these assets, which we did in the Attributions section of the README file in our GitHub repository. OpenJDK is licensed under the GNU GPL 2.0 licence which means we wouldn't normally be able to distribute the project under non-GPL licences, but the Classpath Exception allows us to link the OpenJDK libraries with our own code without placing restrictions on the entire project.

We felt that the Apache Licence was the best choice for our project because it's one of the most permissive open-source licenses and allows others to use our code with little restrictions. Alternatively we could use the MIT licence which is slightly more permissive but the third party code licenced under the Apache Licence already requires us to distribute a copy of the licence with our software even if our code is licenced under MIT. We didn't use the Creative Commons licences as these do not differentiate between distribution of source code and derived programs and are not recommended to use for software.

All features explicitly required in the product brief for Assessment 2 and almost all of the elicited requirements were implemented in our game, except the following:

- **UR_SHORTCUTS** - This requirement was not implemented as all of the functions are easily accessible with either keyboard or mouse and shortcuts would not bring any convenience improvements.
- **FR_ALTER_VOLUME** - This requirement was implemented partially, a mute button is provided in-game and volume can be changed using tools provided by the host OS, however there is no option to change the sound volume in-game. This is due to lack of development time.
